

Instructions for Loading Dolphin Software

1. DO NOT plug in router/base unit into your computer until you have loaded the Dolphin Timing software.
2. Go to <https://www.coloradotime.com/dolphindownload/>
3. Click on download the software installer.
4. Follow prompts for set-up.
5. Plug in router/base unit to your computer and run Dolphin Timing app.
6. If you your team does not yet own a Dolphin Timing System, but you are using it for an upcoming meet, load this software several days in advance of your meet. You may verify that the program is installed by searching for CTS Dolphin on your computer, however, the program will not open until the computer is connected to the router/base unit. It needs a file that is only found in the unit. Once the computer is connected to the router/base unit, Dolphin Timing Software can be opened.
